The design and preparation of the synthetic genes are used in application of gene shuffling, directed evolution and molecular breeding methods. The method allows expression of genes from various organisms such as mammals, plants, year, fund; and bacteria in proteins which losts, such as Becherichia coli and cokaryotic hosts at commercially viable levels, in particular throteins with low yield such as methionine gamma-lyase from P. putida.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       polynucleotide, modifying the polynucleotide by replacing a codon with a different codon to provide a modified polynucleotide, determining free energy of holding per base of the modified polynucleotides, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 6; Page 111-113; 117pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  polynucleofide. The method comprises providing a starting polynucleotide determining the predicted iree energy of folding per base of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          comparing this with that of the original polynucleotide. The method is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 specification describes a method for designing a synthetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        polymuch of the was modified using using the method of the invention.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence represents a modified galactese exidase enzyme. The polynucleotide was modified using using the method of the invention. The specification describes a method for designing a synthetic polynucleotide. The method comprises providing a starting polynucleotide determining the predicted free energy of tolding per base of the polynucleotide, modifying the polynucleotide by replacing a codon with a different endomination and polynucleotide. The method is comparing this with that of the modified polynucleotide. The method is comparing this with that of the original polynucleotide. The method is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAG63583 standard; Protein; 681 AA.
                                                                                                                                                                                                                                                                                                                                directed evolution and molecular breeding methods. The method allows expression of genes from various organisms such as mammals, plants, coast, fundi and bacteria in prokaryotic hosts, such as Escherichia coli and enharyotic hosts at commercially viatio forces, in particular proteins with low yield such as methionine damma-lyase from P. putida.
                                                                                                                                                                                                                                                                                                                                                                                                                                 useful for developing nucleic acid sequences that enhance expression of
the encoded protein in a heterologous host. The design and preparation
of the synthetic genes are used in application of gene shuttling.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           pesigning synthetic nucleic acid sequences for improved amplification, expression in host cell, by comparing free energy of folding of a starting polynucleotide and a modified polynucleotide having a codon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 02-AUG-2001
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Hypomyces rosellus.

All it is a validate catalyses the exidation of figurants in the present of indicatal oxygen to Digalactors catalyse individual bydrogen peroxide.

Ther substitutes for galactorse exidase include dihydroxygeneroe, galactorse exidase include dihydroxygeneroe, galactorse methyl-alpha-Digactopylanose and methyl-detritoral exidese. This perfector would be useful in transferice plant production which in turn would be useful for improving the guality of field of field. The proving proving proving the field of field of the plant of the detribute of the plant production which in turn would be useful for improving the guality of field of field of the plant of the pl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  production useful for improving the quality of food or feed, for improving sutritional value, palatibility or to destroy antimutritive

                  This invention relates to defence-related signalling genes isolated from the sunflower (Helianthus annuus). The genes encode a neoxanthin cleavage enzyme (NCE), an amino acid permease (AAP) and a glutamic acid rich protein (GKr). The signailing gene is useful for increasing the resistance of a plant to a pathogen such as fungus, virus, bacterium,
                                                                                                                                                               acid-rich protein useful for increasing resistance of plant to a pathogen % \left( 1\right) =\left\{ 1\right\} 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Pofonor rolated signalling gene; sanflower, necenthin clearage NCE, amino acid permease, AAP; glutanic acid rich protein; GRP; pathogen resistance; abscisic acid metabolism.
nematude of insect (e.g. European corn borer), preferably
                                                                                                                                                                                          Novel isolated defence-related signalling gene isolated from sunflower encoding neoxanthin cleavage enzyme, amino acid permease or glutamic
                                                                                                                                                                                                                                                                                Bidney DL, Crasta OR,

Covry Match 4.3%; Score 147; 5B 22; Length 1749; Best Local Similarity 19.8%; Pred. No. 0.059; Matches 143; Conservative d6, Mismatches 248, Indels 244, Saps Selectinia spp., Phoma spp., or Phomopsis spp. by stably incorporating a monstruct containing the gene into the genome of the plant. The gene is useful for regulating gene expression in a plant, in response to a attmains such as infection with a pathogen, damage from a pathogen, bydroden peroxide, pasmonic acid, methyl jasmonate, safleylic acid, called acid or expression of a gene encoding exalic acid oxidase. The genes are also useful for stem-preferred regulation of gene expression in a plant. The genes are useful in agriculture, particularly in the broading of crop plants with improved agronomic traits, for modifying abscisic acid (AMA) methodism and for modifying amino acid transport and content in plants. The present sequence represents a glutamic acid rich protects (GRC)-like protect is surflower AAB used in the characterisation of sunflower AAP. 5x0 tapintantlytapitaldidakijimantillapijikjiksomgaldilgimanfvy: 588 617 Y 617 457 GURRGIPFEDSTPVFTP------EIYVPEQDTFYKQNPNSTVRAYHSISLLLPDGRV 507 27k asnldlulavyphys – vttngthalvsplpgsvtisynvdasgkstnicsgggvaiag 329 i51 qsaiqtqndqwt----qvfsdndyn-aliqn------446 lidpleijvyttddlladpklwsvltittsldngnvilgadgsiav------ 491 681 Inauquestu----nintrognediqaiquistusietspfggnagne-ilnaggtlttg 735 568 ISKASLIRYGTATHTVNTDQRRIPLILTNN-------GGNSYSFWVPSDSGVALFG 616 469 GERQSNEOVARIAMAMIDAVMIDAVEGEILIFFUSSFUTQUSDATINAHIITLGEFG (5) ivwaddstrisqnisagggtmgg----nggfvetsgakslmvddtarvnttatmgelgtw 445 185 liimagdisvte 64 --- NVNGLSMLFRQF/NQNGWIGRHEVYLSSF@TNWGSPVASGSWFADSTTKYSNFETRP 120 6 GSAISRNN--WAVTCDSAQSGNECNKAIDGNKDTFWHTFYGANGDPKPPHTYTIDMKTTQ 63 RSDNHAWLED-------WENGSV-FJAGESTAMNWYYTSGSGDVKSA 368 HDMFCPGISME GNGQIVVTGGNEAKKTSLYESS-----SDSWIPGPDMQVARG - 271 admittauspa (a. y----qlqpvaltssaqsviftanilingslqvqtaqnivsqpssslsa---veiasdvl 680 ENGGGGLOGDOTTNHEDAQIFTENYLYDSNGNLAIREKITRISIQSVKVGGKIIISTUSS 567 --YQSSATMSDGNVFTIGGSWSGGVFFKNGFVYSPSSKTWTSLPNAKVNPMLTADKQGLY 329 dqiarrjutrdrsqnjyggtvriggdtgggltlpnasqtlidsnsvvkadalltgnggtv 389 ARYVKLVAITEANGOPWISIAEINVFOASSY-----TAPOPGLGKWGPTIDLPI---- 169 ---VPAAAAIEPTSGRVLMWSSYRNDAFGGSPGGITLTSSWD---PSTGIVSDRTVTVTK 223 --ririsjanslisleverspqmnqqqsfs~ldlptlltqg 272 -----psqfafdlanpg 188

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       especially where the vector directs the expression of a neutralising epitope of C. pneumoniae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      disease, Sarcoidosis, Sinusitis, purulent offices media, crythema nodosum or pharyngitis. The polypeptides encoded by the open reading frames of the C. pneumoniae genome (see AAY4584-y35879) can be used in immunogenic compositions as vaccines. Vectors containing C. pneumoniae nucleotides sequences can also be used as immunogenic compositions,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               AAY34584-Y35879 represent the proteins encoded by all the open reading trames in the complete geneme (see AAX31990) of Chlamydia pneumoniae. C. pneumoniae causes respiratory disease such as pneumonia and bronchitis and is thought to be a contributing factor in heart
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           (GEST ) GENSET.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             04-NOV-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ξ
                                                                                       therapy and vaccine production. N and P may be used in the prevention, aliagnosts and treatment of discuses associated with inappropriate P expression. For example, N and P may be used to treat discurders associated with decreased expression by rectifying mutations or deletions in a patient's genome that affect the activity of P by expression of the proteins of expression by rectifying mutations of deletions in a patient seam proteins of P. Additionally, N may be used to produce the colon cancer-associated Ps. Additionally, N may be used to produce the colon cancer-associated Ps. Additionally, N may be used to produce the colon cancer associated Ps. Additionally, N may be used to produce the colon cancer-associated Ps. Additionally, N may be used to produce the provention of distriction and treatment of colores tall can income and in the properties to Additional Ps. Additional P
